PRESS INFORMATION

NEW UPDATE FOR FLEXCONFIG RBS SUPPORTS CAN-FD

Göppingen, 28 July 2016 – The FlexConfig RBS software of the STAR COOPERATION is one of the highest performing configuration tools for remaining bus simulations and gateways in the automotive area. The update 4.1, which is available since July and comes with numerous new features, extends the application to additional bus systems.

For years, engineers, developers and technicians have been placing their trust in the FlexConfig RBS software with which they can generate gateway configurations or remaining bus simulations easily, quickly and partly automated. In combination with the FlexDevice product family also offered by STAR, they have a highly efficient and perfectly attuned system for control unit and integration tests at their hands. The benefit: after connecting with a power source, the compact and robust FlexDevice tools can operate configured gateways and remaining bus simulations autonomously and within a very short time, no personal computer is necessary during operation.

In addition to the CAN and FlexRay bus systems, the release of 4.1 now also supports CAN-FD and Ethernet. The integrated manipulation editor, over which the data to be sent can be influenced actively at all times during operation, has also been expanded significantly. Another new feature is that the visualization with the android software FlexConfig Analyzer offered for free by the STAR COOPERATION can be performed in parallel to the execution of gateways or remaining bus simulations. The new release is completed with the support of the current FIBEX and AUTOSAR bus description formats in order to ensure the smooth application for different OEMs.

About the STAR COOPERATION

Since its foundation in 1997, the STAR COOPERATION has been accompanying its customers in numerous projects in after sales, automotive electronics as well as sales and offers consulting and implementation services in technology, logistics and digital business. Companies of different sizes and industries profit from interdisciplinary teams of experts and group-wide synergies. In addition to know-how and many years of experience, the STARS are united by very special values: responsibility, competence and passion.

STAR COOPERATION GmbH is certified according to quality standard ISO 9001:2008.

The Experts for Automotive Electronics' portfolio includes extensive services in workshop, manufacturing as well as development services for test and validation of automotive E/E systems of all current and voltage ranges as well as all automotive bus systems.
