## FlexConfig Analyzer 3.3 – new version

**Göppingen, 27.12.2018 – With the FlexConfig Analyzer, you can easily and quickly visualize CAN, LIN or FlexRay data on an Android smartphone or tablet. At the end of December 2018, STAR COOPERATION released the latest update, FlexConfig Analyzer 3.3, with many new features.**

### FlexConfig Analyzer 3.3: How the system works:

**Quickly ready for work and easy to use:** You do not need extensive expertise to use FlexConfig Analyzer 3.3. Set up a **wireless connection** via Bluetooth or WLAN to a **suitable bus interface** to display your CAN-FD, CAN-HS, LIN or Flex-Ray data on a smartphone or tablet. You can create new display sets and save them within a very short time. Modern tablet **high-resolution touch screens** clearly map the required signals.

Do you already create gateways and restbus simulations with FlexConfig RBS and run them on a FlexDevice? Then you can operate the FlexConfig Analyzer in parallel. This way you display the signals of a gateway or a restbus simulation during operation and check whether they are working properly in real time.

### This is new to FlexConfig Analyzer 3.3

Two particularly handy features characterise the smart system after its release:

- Now use the FlexDevice-S as an interface as well.
- With the new version FlexConfig Analyzer 3.3 you visualise bus signals in the newest vehicle generations. Because the release also supports the database formats AUTOSAR (\*.arxml) 4.0.3, 4.1.1, 4.2.1, 4.2.2, 4.3.0.
