More performance with the new update for FlexConfig RBS 4.5

Göppingen, 27.12.2018 – Create gateway configurations or restbus simulations easily, quickly and partially automatically: The software FlexConfig RBS of STAR COOPERATION is one of the most powerful configuration tools in the automotive industry. On November 15, 2018, the experts for vehicle electronics released the new version FlexConfig RBS 4.5. Practical features provide even more performance.

FlexConfig RBS: How the system works:

For years, engineers, developers and technicians have been relying on the software FlexConfig RBS: You can quickly and easily configure gateways and create restbus simulations with the powerful STAR® system. Combine innovative software with the STAR COOPERATION FlexDevice family of products and use a highly efficient and perfectly matched control unit and integration testing system.

As soon as you connect the compact and robust FlexDevice devices to a power source, they autonomously start the configured gateways or restbus simulations. A PC is not needed during operation. In the meantime, use the manipulation editor to change frames or signals of the gateway or the restbus simulation to be sent. This way, you have active influence on the data to be sent at all times. At the same time you will see all important bus data visualised on a tablet or smartphone with the FlexConfig Analyzer app.

This is new to FlexConfig RBS 4.5

FlexConfig RBS 4.5 integrates many new features for better performance of your gateway projects: Multicore Support for FlexDevice-S/L/L²: Easily create even more complex gateways, thanks to 20 separate and variable bus interfaces. You use two ARM Cortex-A9 cores to run the configured restbus simulations or gateways.

The **first 100BASE-T1 configuration will be available soon** and FlexDevice-L/L² devices can now be configured with more than two 100BASE-T1 channels.

The **more powerful “Database Updater”** replaces the previous “K-Matrix Update” and now also supports automotive Ethernet-based databases. This updates your FlexConfig RBS projects to a new version without having to re-create the project. This saves you time.

BU: FlexConfig RBS 4.5 and the new devices of the FlexConfig family, for even more complex gateways and restbus simulations.

About STAR COOPERATION

Networked competence and passion for your success: Since 1997, STAR COOPERATION has been supporting companies of all sizes and sectors in efficiently planning, designing and successfully implementing projects. As our customer, you benefit from interdisciplinary know-how and synergies in the areas of MEDIA, LOGISTICS, CONSULTING, IT, ELECTRONICS, ENGINEERING. Experienced experts assist you in practical areas: As a reliable partner, we deliver innovative ideas and well thought-out solutions accurately adapted to your needs. So that you can make the most of your resources and they improve every day.

STAR COOPERATION®

Your Partners in Excellence

STAR COOPERATION GmbH is certified under the management systems ISO 9001:2015, ISO 50001:2011 and ISO 14001:2015.

Concentrated know-how in the field of ELECTRONICS: Our automotive electronics experts provide extensive solutions in the field of workshop, production and development for test and validation of automotive E/E systems for all power and voltage ranges as well as all bus systems.

We look forward to a voucher copy.
