

## Release Notes FlexCard WINDOWS

### FlexCard Windows setup S6V5A-F

**Release Date:**

November 16, 2015

**Description:**

This is a maintenance release with no functional change and compatible with the previous release.

**It contains the following changes:**

- Changed: Layout and company information adapted to STAR COOPERATION.
- Changed: Removed PDF documents which refer to discontinued products.
- Updated: FlexUpdate application (added support for FlexDevice-L).

### FlexCard Windows setup S6V4A-F

**Release Date:**

September 3, 2014

**Description:**

This is a maintenance release and compatible with the previous release.

**It contains the following changes:**

- Added: FlexCard PMC II firmware S6V5-F: Added support for MSI (message signalled interrupts). This feature is not supported by FlexCard S6V4-F Windows driver. Windows driver S6V4-F is compatible with firmware S6V5-F.

### FlexCard Windows setup S6V4-F

**Release Date:**

July 6, 2012

**Description:**

This is a bug-fix release and compatible with the previous release.

**It contains the following changes:**

- Added: Windows 7 64 bit support
- Fixed: Valid-flag in FlexRay TxAcknowledge packet
- Fixed: Writing on GTUC11 during monitoring
- Fixed: Memory leak in fcbOpen
- Fixed: FlexCard USB cannot be found after stand-by
- Fixed: Error when reading FlexRay message buffer 1
- Updated: FlexUpdate application

### FlexCard Windows setup S6V3A-F

**Release Date:**

November 26, 2010

## Description:

This is a bug-fix release and compatible with the previous release.

## It contains the following changes:

- Fixed: CAN license issue on FlexCard USB

## FlexCard Windows setup S6V3-F

### Release Date:

June 30, 2010

### Description:

This is a minor release with new features and compatible with the previous release.

### It contains the following changes:

- Changed: Error text extended for CC configurations (FlexCard USB only)
- Added: New hardware support of FlexCard USB CAN
- Added: Windows 7 32 bit support
- Added: CAN transmit FIFO
- Fixed: Latency and performance issues
- Fixed: Status packets with wakeup information
- Fixed: Self synchronization with wakeup procedure
- Fixed: Self synchronization with usage of one channel
- Fixed: Broken self synchronization with dynamic segment
- Fixed: Software acceptance filtering for channel both (FlexCard USB only)
- Fixed: Standby behaviour under Windows Vista
- Fixed: Symbol window and network idle time error packets
- Fixed: Busy devices in enumeration function (FlexCard USB only)
- Fixed: Error handling in receive process
- Updated: FlexUpdate and FlexAlyzerV2 applications
- Updated: CAN demo application with transmit FIFO

## FlexCard Windows setup S6V2-F

### Release Date:

January 29, 2010

### Description:

This is a minor release with new features and compatible with the previous release.

### It contains the following changes:

- Added: New hardware support of FlexCard USB
- Added: Configuration of time stamp source, external triggering available
- Added: Trigger configuration for internal FlexCard time stamp
- Added: High resolution FlexCard time stamp (64 Bit)
- Added: Fault tolerant CAN support (FlexCard USB only)
- Added: Function that reads whether FlexRay self synchronization is available (all FlexCards)
- Changed: Avoid transmission of wrong FlexRay wakeup symbols during monitoring start
- Changed: Trigger configuration of software timer above 400 seconds possible
- Changed: User defined card id value in complete 32 bit range possible
- Changed: Error text extended for CC configurations
